

Weekly Writing - Week 1

Julissa Davila

26 August, 2025

1. What are your thoughts on all coding is done on ChatGPT and doing more conceptual in class or do would I want to learn more through trial and error.

I think using chatGPT can be helpful with coding in some situations especially when I need to find errors with formatting. But at the same time, its not something I would want to use often. In previous classes, we were told not to rely on AI because it might affect the way we learn or think through problems on assignments. This is why I prefer the trial and error approach more and would like to see more of that in class. For me, figuring out why something doesn't work is frustrating but I think it makes the concepts easier to remember in the long run because it took so long. I don't mind using chatGPT as a backup to check my work, but I would rather focus on experimenting and learning more hands on in the class and for the assignments.
