

Weekly Writing - Week 1

Lauren Molnar

8.28.25

1. What are your thoughts on all coding is done in AI, or do you want to learn in trial so you understand?

I think coding should be trial and error so that we actually learn and have the chance to understand. I think using AI is a great tool if we need help to fix an error. I have learned a lot from my previous classes and some of which I have used in my current internship. I would not have analytical skills if coding was done by AI. It also helps me understand concepts if I actually try the code myself. Since AI is not always correct, I prefer to follow class notes as well. Additionally, I feel like people will have mixed opinions on using AI, so you will need to have understanding at some point. If you never learn how to code, it will put you at a disadvantage.
