

# Weekly Writing - Week 1

Thao Nguyen

August 30, 2025

##1

When it comes to coding in R or in any other languages in general, I usually find myself deciding between whether to use Chat GPT or spend the next hour trying to figure out the bugs. I believe people recently are relying too much on Chat GPT without thinking clearly through the problem. Chat GPT makes it easier to get things done. it is like having a tutor always by your side. However, over reliance can weaken our ability to think critically and deeply about problems. Learning and solving problems are supposed to train the brain, yet with Chat GPT available, that process is often skipped. If people rely on AI tools like Chat GPT, it will be quicker to solve the problems than sit down and think. But what if AI tools are wrong, would people are still able to solve the problem? I believe and I hope in the future world people would use AI as an assistant tools to support the work and not as our replacement for the work
