

Weekly Writing - Week 1

Guoyu Wang

30 August, 2025

1. Bash my head on AI or Theoretical concepts

This week's class gave me a clearer understanding of data analysis. I realized that data analysis is not merely about collecting numbers, it involves using the data to discover useful information and uncovering the underlying reasons. In class, we discussed correlation, which made me realize that one should not only focus on the relationship between numbers but also consider deeper logic. When writing R code, I sometimes used some AI tools, which helped me fix some code errors and allowed me to focus on understanding the analysis. When using AI tools, I need to indicate this usage at the top of the problem set, add comments in the code block, briefly describe the function of the code, and explain my understanding of the code in my own words. Overall, this week has made me more interested in data analysis.
