

# Weekly Writing - Week 1

Jaden James

27 August, 2025

**1. Which of the two worlds are more attractive, all coding done with ChatGPT so more focus in concepts or learn through trial, errors, and coding to understand it better?**

I would have to say that I almost prefer maybe a balance between the two. I think it's good to continue to work through coding but up to a point I think we should have ChatGPT do some of the work. I feel like this gives a good balance between practicing problem solving and working through the code while also not using all your frustration and brain capacity figuring out the code so you can go more in depth into data analysis and understanding the data. If I had to choose one extreme or the other I would say let ChatGPT do the coding and focus all on the data analysis because that is the most important part (in my opinion). Problem solving and using our brain is very important too though. Hence a good balance between the two.
