

Weekly Writing - Week 1

Tyler Pohl

30 August, 2025

1. What are your thoughts on coding entirely by ChatGPT and we learn more conceptually, or should we learn through actual coding and bashing your head?

I think that I would enjoy some combination of both. As of now I do anticipate using ChatGPT, Claude, Perplexity, or Gemini to help me troubleshoot my issues but I do want to fully grasp all of the conceptual ideas within this course. I think that it will be important for me to actually know what I am coding and how the process is working. However, I don't want to face constant frustration due to small syntax errors and I'd like the tools or the ability to fix those issues quickly. Either through tools I've learned in class or by plugging my code into ChatGPT and having it help resolve the issue. In short I think that learning to code is important to me for this class, but I also think that the use of ChatGPT will be helpful in advancing my skills within R.
