Do we say to do all our coding with ChatGPT versus trying to learn R and having a good understanding of RStudio? From a student's perspective which of those two worlds is more interesting? What are your thoughts on all code is done with ChatGPT and we focus on content or do we focus on trial and error of actual coding so you understand it better.

-I feel very indifferent. Understanding the code helps you understand how or why you manipulated the data a certain way and how/ why that changed your outcome. But I also see the other side of it. My friend graduated with a computer science degree from Lehigh University and now works in the IT department at UnitedHealthcare, a major healthcare company in New York. He said his IT department uses AI every day for most projects and tasks. So it raises the question of why go through the hassle of teaching it. I often end up using AI to help me understand. If you train your AI model correctly, it can be used in many ways to help you learn or master skills quickly and efficiently. I often give ChatGPT a prompt to help me understand or master topics in school, so I think that if you are completely stumped, you can use AI to aid your learning. To conclude this ramble, I will say it should be a hybrid

Write your answer here, replacing this text. Use markdown language for formatting (**bold** and *italics*) (or see here for more).

If you'd like to add a header, make sure you do so on a new line and use 2-4 #'s followed by a space.
