Does R Deserve Our Blood, Sweat and Tears Or Should We Just Ask ChatGPT

I would say in order to learn to code, you need both. I have taken about two classes that both involved using R to code and I used ChatGPT for both classes. I had to make sure that I was not relying on ChatGPT to just give me the answers. I don't think we really need to put blood, sweat, and tears into coding. I think that when you use ChatGPT, or any other generative AI resources correctly, it can actually help understand why something is not working, or why you are not getting the output you desire. In terms of coding, we need to stop looking at ChatGPT as a shortcut and almost like another teacher or assistant that can help you learn along the way. Coding is like learning a new language and you might require some extra help, and sometimes professors, teachers, TA's are not available to help. So while I don't believe that we have to bang our head against the wall when it comes to coding, I think that we need to utilize the rich resources and technology around us to help us understand better.
