

Weekly Writing - Week 1

Noah Erickson

30 August, 2025

1. Would you prefer doing all coding with Chat GPT and learning about the concepts or doing the coding on your own?

I see both sides of the question, but I think we should use Chat GPT to do our code. While coding is not my favorite thing, that is not the only reason. I think more students will end up using AI in their careers than R. It could be beneficial for students to get good at using AI to get the responses that they need to answer the coding questions. I would strongly discourage students to copy and paste the assignment, instead, have students create questions to get the best responses. The assignments in class could also make you explain what the AI is doing, and maybe give some sections for students to do on their own so they learn the basics of R. Also, going deeper into the concepts of data analytics sounds like it would be interesting to me. But, I think no matter which way the class ends up going in the future, learning about data analytics will be valuable for students future careers.
