

Weekly Writing - Week 1

Geoffrey Giannetti

30 August, 2025

1. What are your thoughts on all coding is done with ChatGPT and more is done in concepts, or do you want to learn through actual coding so you understand it better?

I would like to take an approach more focused on learning to code through actual coding. While ChatGPT is a great resource for coding, I think it would be more beneficial to learn how to code myself because learning how to program in R is a very valuable skill especially with the field I'm going into. Relying too much on ChatGPT can lead to not fully understanding the material, which makes it difficult to use in the future. Moreover, learning R will also help with learning other programming languages in the future. Core concepts such as variables and booleans are used very frequently in all languages, and familiarity with one language makes learning other ones easier.
