

# Weekly Writing - Week 1

Aidan Wechet

26 August, 2025

## **1. What are your thoughts on coding with chatgpt or learning coding through trial and error?**

When it comes to learning how to code there are many pros and cons to using ChatGPT. ChatGPT could be used for many different things related to coding. Someone could use it to write a couple lines of code, but on the other hand, someone could use it to write a whole coding assignment. Using ChatGPT to complete your whole assignment can lead to a lot of misunderstanding and lack of coding skills. Writing code through trial and error also comes with many pros and cons. If someone decided to write code without the help of AI they would develop strong problem solving skills and stronger coding skills. When I started coding, during my freshman year, there was no AI to help you code. So I have been used to learning it myself and then occasionally get help with a couple lines of code from AI if I get confused. Overall, I believe there are many benefits of obtaining help from ChatGPT when coding, but in the end I think it is always better to learn yourself first and then get help if you're confused.
