

Weekly Writing - Week 1

Thiago Sawada Guiguer

30 August, 2025

1. What are your thoughts on all coding being done with ChatGPT and having more concepts, or do you want to learn through trial and error actual coding so you understand it better.

I believe that EC242, as a capstone course in Data Analytics, should still include coding, even though ChatGPT could theoretically handle all of it. Writing code by hand, even while occasionally seeking help from generative AI, gives us a stronger understanding of the concepts and how they work. Relying entirely on AI risks leaving us unprepared, since it can sometimes hallucinate or produce incorrect solutions. If that happens and we don't understand the code ourselves, we won't know how to fix the errors or even guide the AI toward the correct answer.
