

Weekly Writing - Week 1

Muhammad Najmi bin Sharull Anuar

30 August, 2025

1. What are your thoughts on coding using the ChatGPT only or by learning the code deeply by trying and error?

My personal thoughts on this matter is I strongly disagree with the usage of ChatGPT to do coding. I believe that in order to be successful in coding, there are no shortcuts at all. Everyone needs to go through trial and error regardless of what certificates they have, how high their positions are in the company. There was a quote saying, "The only real mistake is the one from which we learn nothing" by Henry Ford. This perfectly correlates with usage of ChatGPT to do the coding which makes us learn nothing at all due to our dependence on AI. Even though coding is not everyone's talent, I believe it requires hard work from ourselves and a strong mindset to make sure the solution is working at the end of the day. In conclusion, trial and error is the right way to do coding and the only way for us to learn it thoroughly.
