1. Letting AI do the work vs. Learning how to code

#####It is better to go through the tough process of learning how to code as opposed to learning concepts while letting AI do all the work. Although AI is a useful and easy to access tool, it is not perfect since inaccuracies frequently occur. Humans are also imperfect, however there is an advantage since we know what we want to code for and make adjustments accordingly while AI cannot. In regards to the course, I believe there is analyzing data is best when learning how to code, because we will learn the functions of each line of throughout the course when dealing with datasets, which then can help us with interpreting data. I don't see how people can interpret data without going through its steps. Learning how to code is also beneficial since it is a technical skill which can be useful in future career opportunities.
