

Weekly Writing - Week 1

Rafid Al-Sewari

30 August, 2025

1. Should all programming in class be done by AI then reviewed over or should we try to program the work ourselves?

I believe we should be doing our own programming. I say this because making sure that you are doing it correctly actually helps you learn how the code works. Even when you are having issues and you do eventually figure out what the issue was. I would say that is even more helpful then getting it correct the first try. I still think AI should be used as a tool to help if you are completely stumped, but not to be used to solve it without an attempt with effort.
